

(AESA) Fire control radar

RAVEN ES-05 is a high performance AESA radar designed for the Saab Gripen NG swing role fighter that builds on over 60 years of fire control radar experience. RAVEN ES-05 has been designed in close collaboration with Saab.

RAVEN ES-05 features an innovative roll-repositionable AESA antenna to provide a full ±100° field of regard allowing maximum situational awareness and platform survivability. This Wide Field of Regard (WFoR) allows the aircraft to turn away after missile launch, whilst still maintaining datalinks to the missile. The highly reliable AESA transmit-receive module technology incorporated in RAVEN ES-05 significantly improves system availability leading to reduced lifecycle costs.

RAVEN ES-05 is part of a family of AESA Radars delivering greater performance and higher reliability than comparable mechanically scanned radars and offers all the advantages of multi-function AESA arrays with significant through life cost savings.

Key features

The RAVEN ES-05 Radar has been designed from the outset to meet worldwide fire control radar detection and target tracking needs combined into one efficient modular system. The RAVEN ES-05 builds on common modular units for a scaleable system architecture to meet the needs of fire control and intercept radar operational requirements whilst remaining resistant to radar countermeasures.

The AESA antenna is coupled to fully digital multi-channel exciter/receiver and processor Line Replaceable Units (LRUs). These provide a comprehensive mode suite which includes air-to-air, air-to-surface, interleaved and support functions, which can be readily adapted or extended in software to meet future needs.

The radar makes use of AESA alert-confirm techniques to confirm targets on first detection. This combined with optimised AESA waveforms results in increased track initiation ranges, whilst simultaneously maintaining situational awareness. The instantaneous scanning ability of the AESA also provides a comprehensive suite of interleaved air and surface modes, thus providing the pilot with all round situational awareness.

Key benefits

- → Wide field of regard
- → Low cost ownership
- → Superior performance
- → Superior reliability
- → Software driven
- → Easy to use
- → Mode interleaving
- → High availability
- → Electronic beam steering
- → Missile support

Reliability

At the core of the AESA radar design is the ability to tolerate individual item failure. Component failures in the array result in graceful performance degradation rather than complete system failure, delivering high operational availability when compared with conventional radar systems.

Significant cost benefits over the life of the system are realised due to the high reliability, increased availability and reduced maintenance requirements.

Modes capabilities

The mode set allows the system to deliver all of the functional capabilities of a Fire Control Radar within an acceptable platform volume. This is combined with the full capabilities of a detection, tracking and prosecution system to meet the needs of emerging new world threats. The system utilises all the benefits of an electronically scanned array to deliver:

- → Significantly enhanced performance relative to similar sized systems with the same weight, volume and power
- → Comparable performance to larger mechanically scanned system whilst offering reduced weight and power

Technical specification

X Band	
+/- 100°	
Instant beam switching	
Liquid and air	
215kg	
Ethernet, 1553B	

Modes

Air-to-air modes

Search while track
Single target track

Air combat modes

HUD search		
Vertical scan		
Slewable scan		
Boresight		

Air-to-surface modes

Interleaved modes

Customer configurable	
Interleaved air and surface modes	

Support functions

Passive search while track	
Missile datalinks	
Cued search	
Non-cooperative target recognition	
Comprehensive ECCM suite	
Weather mode
